30,000 square feet east portion of the building

Owner Mike Higgins 414.762.1114

Inspection Date 02/16/2017

Commercial Supervisor Jumaane Cheatham and Commercial inspector Patrick Wisneski

At 2300 W. Cornell Street location Mid-America IBC accepts “legally empty” (owner to provide information on this term if needed) plastic and a limited quantity of stainless steel totes to be washed or recycled. At this location 55 gallon steel or plastic drums are not present, nor is there a heat or mechanical drying process in use.

At this site the observed process was to accept only legally empty containers if that criteria was not met the container was referred to as a heavy container and was shipped back to the company it came from. The accepted containers are then put in an area to be washed internally, this is where water/soap is introduced to the interior of the container thru the top filling port the drain port of the container is connected by a hose to a large holding tank where the contents will be shipped to a licensed facility for processing, (shipping manifest can be provided by the owner). The container is then moved to an area where a floor drain is present then the outside of the container is rinsed off. The container is then staged in storage to be shipped out for reuse.
